

Medigoods Israel Solar Go Green Energy Solutions

Since 2003, **Medigoods** has been providing Wind and Solar Systems to the Israeli market.

Medigoods has developed a prototype generator designed to reserving and recycling electric energy faster that in any way known.

Medigoods has developed a patented innovation that provides a longer driving range in Electric and Hybrid cars.. The energy can be used for other electric consumers of 110-220VAC as well.

Medigoods generator works with all kinds of batteries.

Technology:

Medigood's 'Magic generator' uses outsourced energy from wind and sun, as well as kinetic energy from wheel's brake to produce and reserve electric energy into the "magic generator" and in the main battery in order to recharges main battery during driving and ALSO in PARKING mode.

This concept reduces dependence on grid's load connection.

The generator device set is about 50kg and 60x40x30 cm. The mechanism inside the box is assisted by Electronics, Electrical and Mechanical Engineering.

The price of the generator is an inexpensive and can be marketed as a kit, License or as a branded name, or JV, EV's manufacturers will Install the device and we are looking for strategic partners to increase our sales and handle marketing together.

First App for EV's received approvals: USA , PCT examined, patent ability and innovation for all of 19 claims.

Standards Institution of Israel: IEC610100.

Mr. Tani Aharoni, CEO of Medigoods, MCSE is an expert on Electricity and alternative solar systems.
